Specialist security services

Helping
companies
protect sites
and people

Mission statement

To provide an independent and forward thinking security service to meet customer needs, using our extensive knowledge and expertise.

Our services

Risk assessment

Colin Firman Associates (CFA) helps customers to determine their exact security needs enabling them to protect property and people in the most efficient and cost effective way. The security options covered within our complete service are:

CFAs' risk assessment service considers all aspects of site and personnel security and provides customers with a comprehensive report outlining all areas and levels of risk. This report can be used as the basis for effective security policy and procedures or to prove compliance with regulations.

Electronic security system design

CFA will design and specify integrated electronic security systems to meet site and budget needs. We provide an independent recommendation of which products and systems should be installed for maximum effectiveness. We are able to offer this service based on our continual testing and evaluation of all current, market leading security products.

Security tender management

CFAs' security tendering service starts by defining the type of security systems needed to make a site secure. From this a detailed tender document is produced, against which all suppliers and installers can quote. We then collate all the relevant tender information, helping customers select the best solution for their needs. This service not only saves our customers time and money but also ensures their security needs are not compromised by vested interests in specific equipment and systems or the use of low grade products.

Security audits and health checks

As a site's usage changes, so too does its security needs. CFA offers a comprehensive security audit service to ensure that site owners and managers fulfil all legal and ethical requirements for their personnel and other site users and that the building and equipment assets are appropriately protected. We identify any security risks and recommend the actions necessary to correct them.

Security installation project management

CFA will project manage the entire design, installation and commissioning process of a security system. This gives customers peace of mind and ensures all work is completed to an agreed schedule and to the required Health and Safety standards. We only hand over the security system operation once we are satisfied that the system is fully commissioned and meets the agreed specification completely.

Cost effective security

CFA reduces its customers risk from threats to property, people, assets and from litigation. We save customers money by providing expert advice on security systems, products and services. Our expertise and objectivity mean that CFA customers benefit from installing the right products and have the correct security policies and procedures - maximising their security effectiveness within any given budget.

Specialist security services

Due to our high level of security expertise, CFA is able to offer a range of specialist security services to meet precise customer needs. Our specialist services include the following:

- Security scheduling for banks and financial institutions
- Anti terrorist planning
- Electronic counter surveillance
- Evidence gathering
- Specialist security training services
- Contract performance reviews
- Security cost reduction and man power reviews

CFA offers a range of body guarding and personal training. All training is designed to suit individual needs and is a highly confidential service. Training course titles include:

- VIP and close escort protection
- Media in hostile environments
- Kidnap and crisis management
- Conflict management
- Security guard and door supervisor (SIA)
- Defensive driving
