

*Towed to site*

*Assembled*

*Monitored 24/7*

***Monitored rapid deployment CCTV***

## Rapid deployment CCTV

The award\* winning **iGuard** CCTV tower from iWatch is simply towed into place to provide almost immediate site security, virtually anywhere. The **iGuard** is set up in minutes and comes with round-the-clock, remote monitoring by fully trained security operators. The **iGuard** is a straightforward and flexible security solution for remote, temporary or dangerous sites, removing the need for any staff presence.

The **iGuard** is available to rent or buy through approved, professional and licensed security companies.

The **iGuard** rental package includes:

- Delivery of the **iGuard** to UK or Irish sites within 24 hours.
- Commissioning of **iGuard** and related site security equipment.
- 24/7 remote monitoring to BS 8418 by trained operatives.
- Immediate response to any incidents.
- Verbal warnings to trespassers.
- Police call out when necessary.
- Removal of the **iGuard** at the end of the rental period.

## The iGuard system

The **iGuard** is a well designed and well considered security solution comprising all of the following:

- A CCTV dome camera mounted on a telescopic tower.
- "Point and shoot" ergonomic dome control.
- A loud speaker to instruct site visitors or warn off intruders.
- Movement and motion detection for automatic alarm activation.
- On-site CCTV recording for the provision of evidence.
- Built-in 3G CCTV image transmission for remote viewing, recording and control.
- Battery back up for 24 hour operation without power.
- LPG generator option for full stand-alone solution.
- Advanced alarm protection technology to reduce false alarms caused by animals and leaves.

***The iGuard offers a potential new revenue stream for approved security companies.***

\*Best new product, Tools & Equipment category, Interbuild 2008

## The iGuard package

The **iGuard** works in conjunction with iWatch, a 24 hour, 7 days a week monitoring service. The monitoring station is manned by highly trained CCTV operators and meets all BS 8418 standard requirements. False alarms and minor incidents are dealt with immediately and a police response requested to verified site intrusion.

iWatch is one of the UK's and Ireland's leading monitoring stations. It has a proven reputation and many prestigious clients throughout the UK, Ireland and Europe.

The **iGuard** monitoring package includes:

- 24/7 coverage.
- Highly trained CCTV operators.
- Verbal messaging and warnings to remote sites.
- False alarm management.
- Incident management.
- Police call out when appropriate.
- Hard disc CCTV recording for evidential purposes.
- Key holder messaging and report service.

## iGuard applications

The **iGuard** has been designed to help solve security issues at remote, unmanned, dangerous and ever changing sites.

Successful **iGuard** applications include:

- Unmanned, remote sites.
- Empty properties and void areas.
- Fly tipping hot spots and recycling areas.
- Construction sites containing valuable materials and equipment.
- Temporary public sites such as music events and festivals.
- Protection of lone workers or manned guards at remote sites.
- Police incidents where 24/7, immediate surveillance is needed.
- Dangerous sites that are hazardous to humans such as factory contamination areas or disaster zones.

iWatch has over 20 years of remote CCTV monitoring experience. We have pioneered the use of the BS 8418 standard for remote monitoring and excel in providing a high level of service to all our customers. We work very closely with professional security installers to provide remote security solutions to a large range of businesses and services.

iWatch also offers access control; property management; lone worker solutions; key holding; rapid alarm response; data hosting; personal attack assistance; camera patrols; remote building entry and exit; remote barrier control; remote CCTV and alarm monitoring; remote security system set-up and comprehensive video evidence of critical site incidents.

CCTV video images from an **iGuard** are sent across broadband networks to monitoring stations and remote PCs using specialist Teleprecision transmission equipment.

Teleprecision uses 3G mobile phone technology to make a wireless broadband connection when a fixed broadband connection is unavailable or a back-up connection is required. Teleprecision equipment is the ideal choice for use within the **iGuard** rapid deployment tower.
